

The Denville Library Project consists of two building additions and additional parking. The existing library was constructed in 1985 and the interior renovated in 2009.

The existing library (10,280sf) building will be expanded with West and North Additions for an additional 3,840sf. There will be two added meeting/program rooms, ADA compliant rest rooms, storage, and larger Children's and YA areas. The existing meeting room will become quiet/group study. The current plumbing system will receive needed repairs and the bathrooms brought to ADA compliance.

An additional North parking lot will provide 29 parking spaces, supplementing the existing 43 parking spaces south of the building. An outdoor patio adjoining the library will be provided along the rear of the building overlooking the Rockaway River to the west.
